Prescription Medication to Restore and Maintain the Macular Pigment

WHAT IS LUMEGA-Z?
Lumega-Z is a regulated vision-specific medical food designed to maintain and restore the Macular Pigment. A dietary macular pigment protects your macula against blue light, providing an essential role in maintaining the health of your eyes.

Lumega-Z is comprised of more than 30 synergistic nutrients, including high-quality, certified plant-based lutein and zeaxanthin, and other nutrients that have been shown to support macular health.

The science behind Lumega-Z
Comprehensive formula provides macular carotenoids and critical antioxidants

Of the three carotenoids found in the retina, lutein/zeaxanthin has the highest antioxidant capacity, and is found in highest concentrations in the core of the macula. The macula is the most important part of your vision. Macular damage is the only cause in neovascular neoretinitis, and lumega-Z is a highly effective treatment for this condition.

Lumega-Z was developed by a team of internationally acclaimed scientists who have studied the Macula for over 30 years.

WHY IS MACULAR PIGMENT SO IMPORTANT?
Lumega-Z is a regulated vision-specific medical food designed to maintain and restore the Macular Pigment. A dietary macular pigment protects your macula against blue light, providing an essential role in maintaining the health of your eyes.

Vision Performance
Significant improvements in contrast sensitivity, glare disability, and night vision recovery can be achieved by increasing lutein and zeaxanthin intake. Lumega-Z has been shown to support macular health in healthy and damaged subjects.

Lumega-Z is a highly effective treatment for macular damage.

WHAT ARE MEDICAL FOODS?
A medical food is a regulated vision-specific medical food that is intended to be used in the specific dietary management of a disease or health condition. A medical food is a food that, due to a disease or condition, cannot be adequately addressed by conventional dietary management alone. A dietary macular pigment is a medical food intended to be used in the specific dietary management of a disease or condition.

Our Eyes Are Foundations to the Quality of Our Lives
They have an impact on every waking moment and all that we do. Unfortunately, these eyes require a lot of care and attention. You may not always have the time or the means to ensure that you are getting all the nutrients your eyes need.

Lumega-Z, our dietary macular pigment, is a medical food designed to maintain and restore the Macular Pigment.

In recent years, we have seen a significant increase in dietary macular pigment consumption. This increase is largely due to the rise in awareness of the importance of eye health and the role that dietary macular pigment plays in maintaining the health of your eyes.

Lumega-Z is an example of a medical food that is designed to maintain and restore the Macular Pigment. It contains a combination of nutrients that have been shown to support the health of the macula.

THE INGREDIENTS
Developed to Replicate and Restore the Macular Protective Pigment
Lumega-Z is a novel, high-performance, and highly effective formulation that was specifically designed to replicate and restore the protective pigment in the macula.

The novel, synergistic formulation provides a high level of efficiency and reduces droppage.

Lumega-Z contains no artificial colors and it is also gluten, sugar, and dairy free.
